

WL ACCELERATOR - STANDARD

The RMZ Wireline Accelerator (standard) is a wireline stretch simulator device used in conjunction with Hydraulic or Spring jars when jarring at shallow depths in the well bore.

Application

Upward tension on the wireline compresses the spring within the intensifier assembly and the stored energy is transferred to the hydraulic or spring jars located further down the tool string.

Features & Benefits

- Simple and reliable mechanism
- Require less Maintenance.
- Customizable based on customer requirement.
- Tools for sour service (H2S) available upon customer request.

WL ACCELERATOR - STANDARD
