

WL GS RUNNING / PULLING TOOL

The RMZ GS Type Pulling/Running Tool is designed to locate in standard internal fishing necks.

To engage the GS Pulling/Running Tool, a sit-down weight is required for automatic engagement. To release the tool, downward jarring activates the release mechanism by shearing a pin. If required the RMZ GS Pulling/Running Tool can be converted to a Jar-up Release (GR) by fitting a GU Adaptor.

For surface operation the dog assembly has a finger grip to enable the tool to be manually released from the fish neck whilst in the pinned position.

Application

- GS/GR Type Running & Pulling Tool is used with but not limited to Otis and R Locking mandrel. Baker M, K and B1 lock mandrels.
